MUDE (CEGM1000 26)

Introductory Questionnaire

Welcome to

Modelling, Uncertainty, and Data for Engineers

Who are your MUDE teachers?

- Over 30 people involved!
 - You will meet them in class
- Three MUDE Guides

Frans

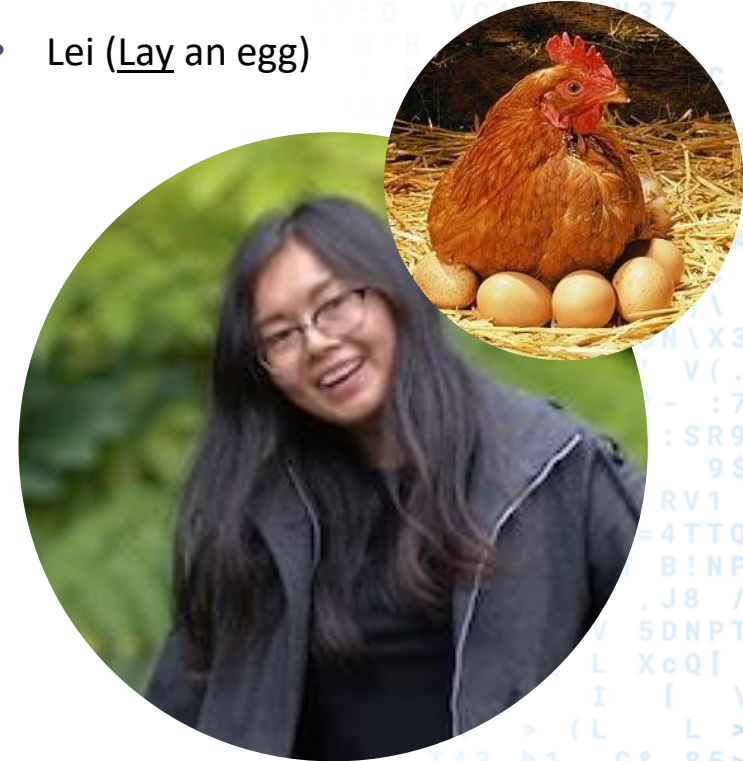

Tom

Jialei

- J-ee-ah (Jug, See, Art)
- Lei (Lay an egg)

- The best people to ask about logistics, personal issues, etc (MUDE-CEG@tudelft.nl)
- At least one of us will always be present in every class session

What is MUDE for?

- What do current professionals need?
 - Programming literacy
 - Expertise about modelling choices
 - Comprehension of uncertainty and risk
 - Ability to handle and analyse data
 - ... in a multidisciplinary setting

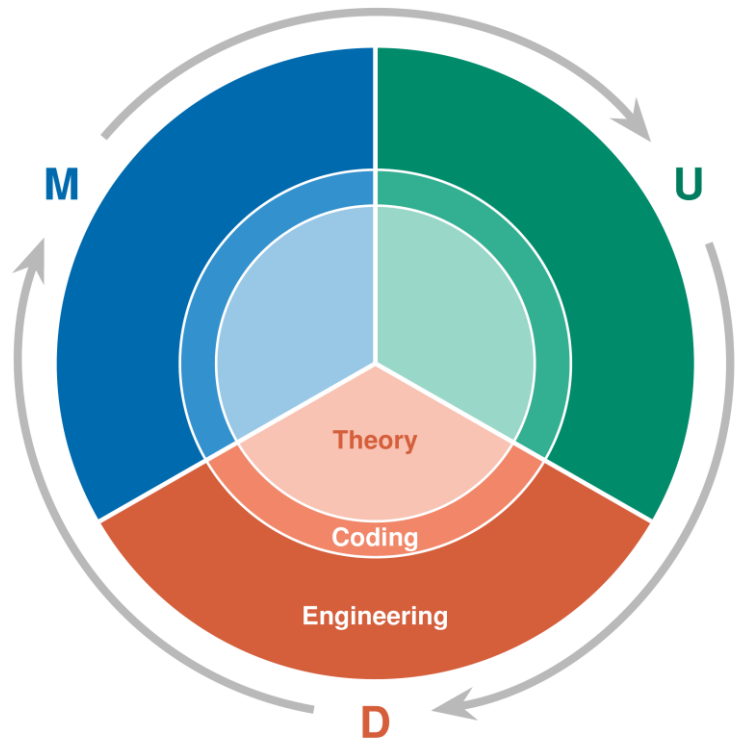

What is MUDE not?

- NOT about applications from your specialization
 - Get grounded in fundamentals applicable across the fields
- NOT a math course as you know them from your BSc
 - Taught by CEG staff, connected to CEG applications
- NOT crash course in Python
 - Some prior experience is expected, means to catch up are there
- NOT going to make you a "pro" coder
 - Get comfortable with coding, see a host of cool implementations

How does MUDE work?

- Students from 3 programs, teachers from 7 departments
- General theory, various engineering applications

Teaching approach:

- Active learning in weekly cycles
- Weekly responsible teachers

Lecture

Question Hour

Workshop

Question Hour

**Group
assignment**

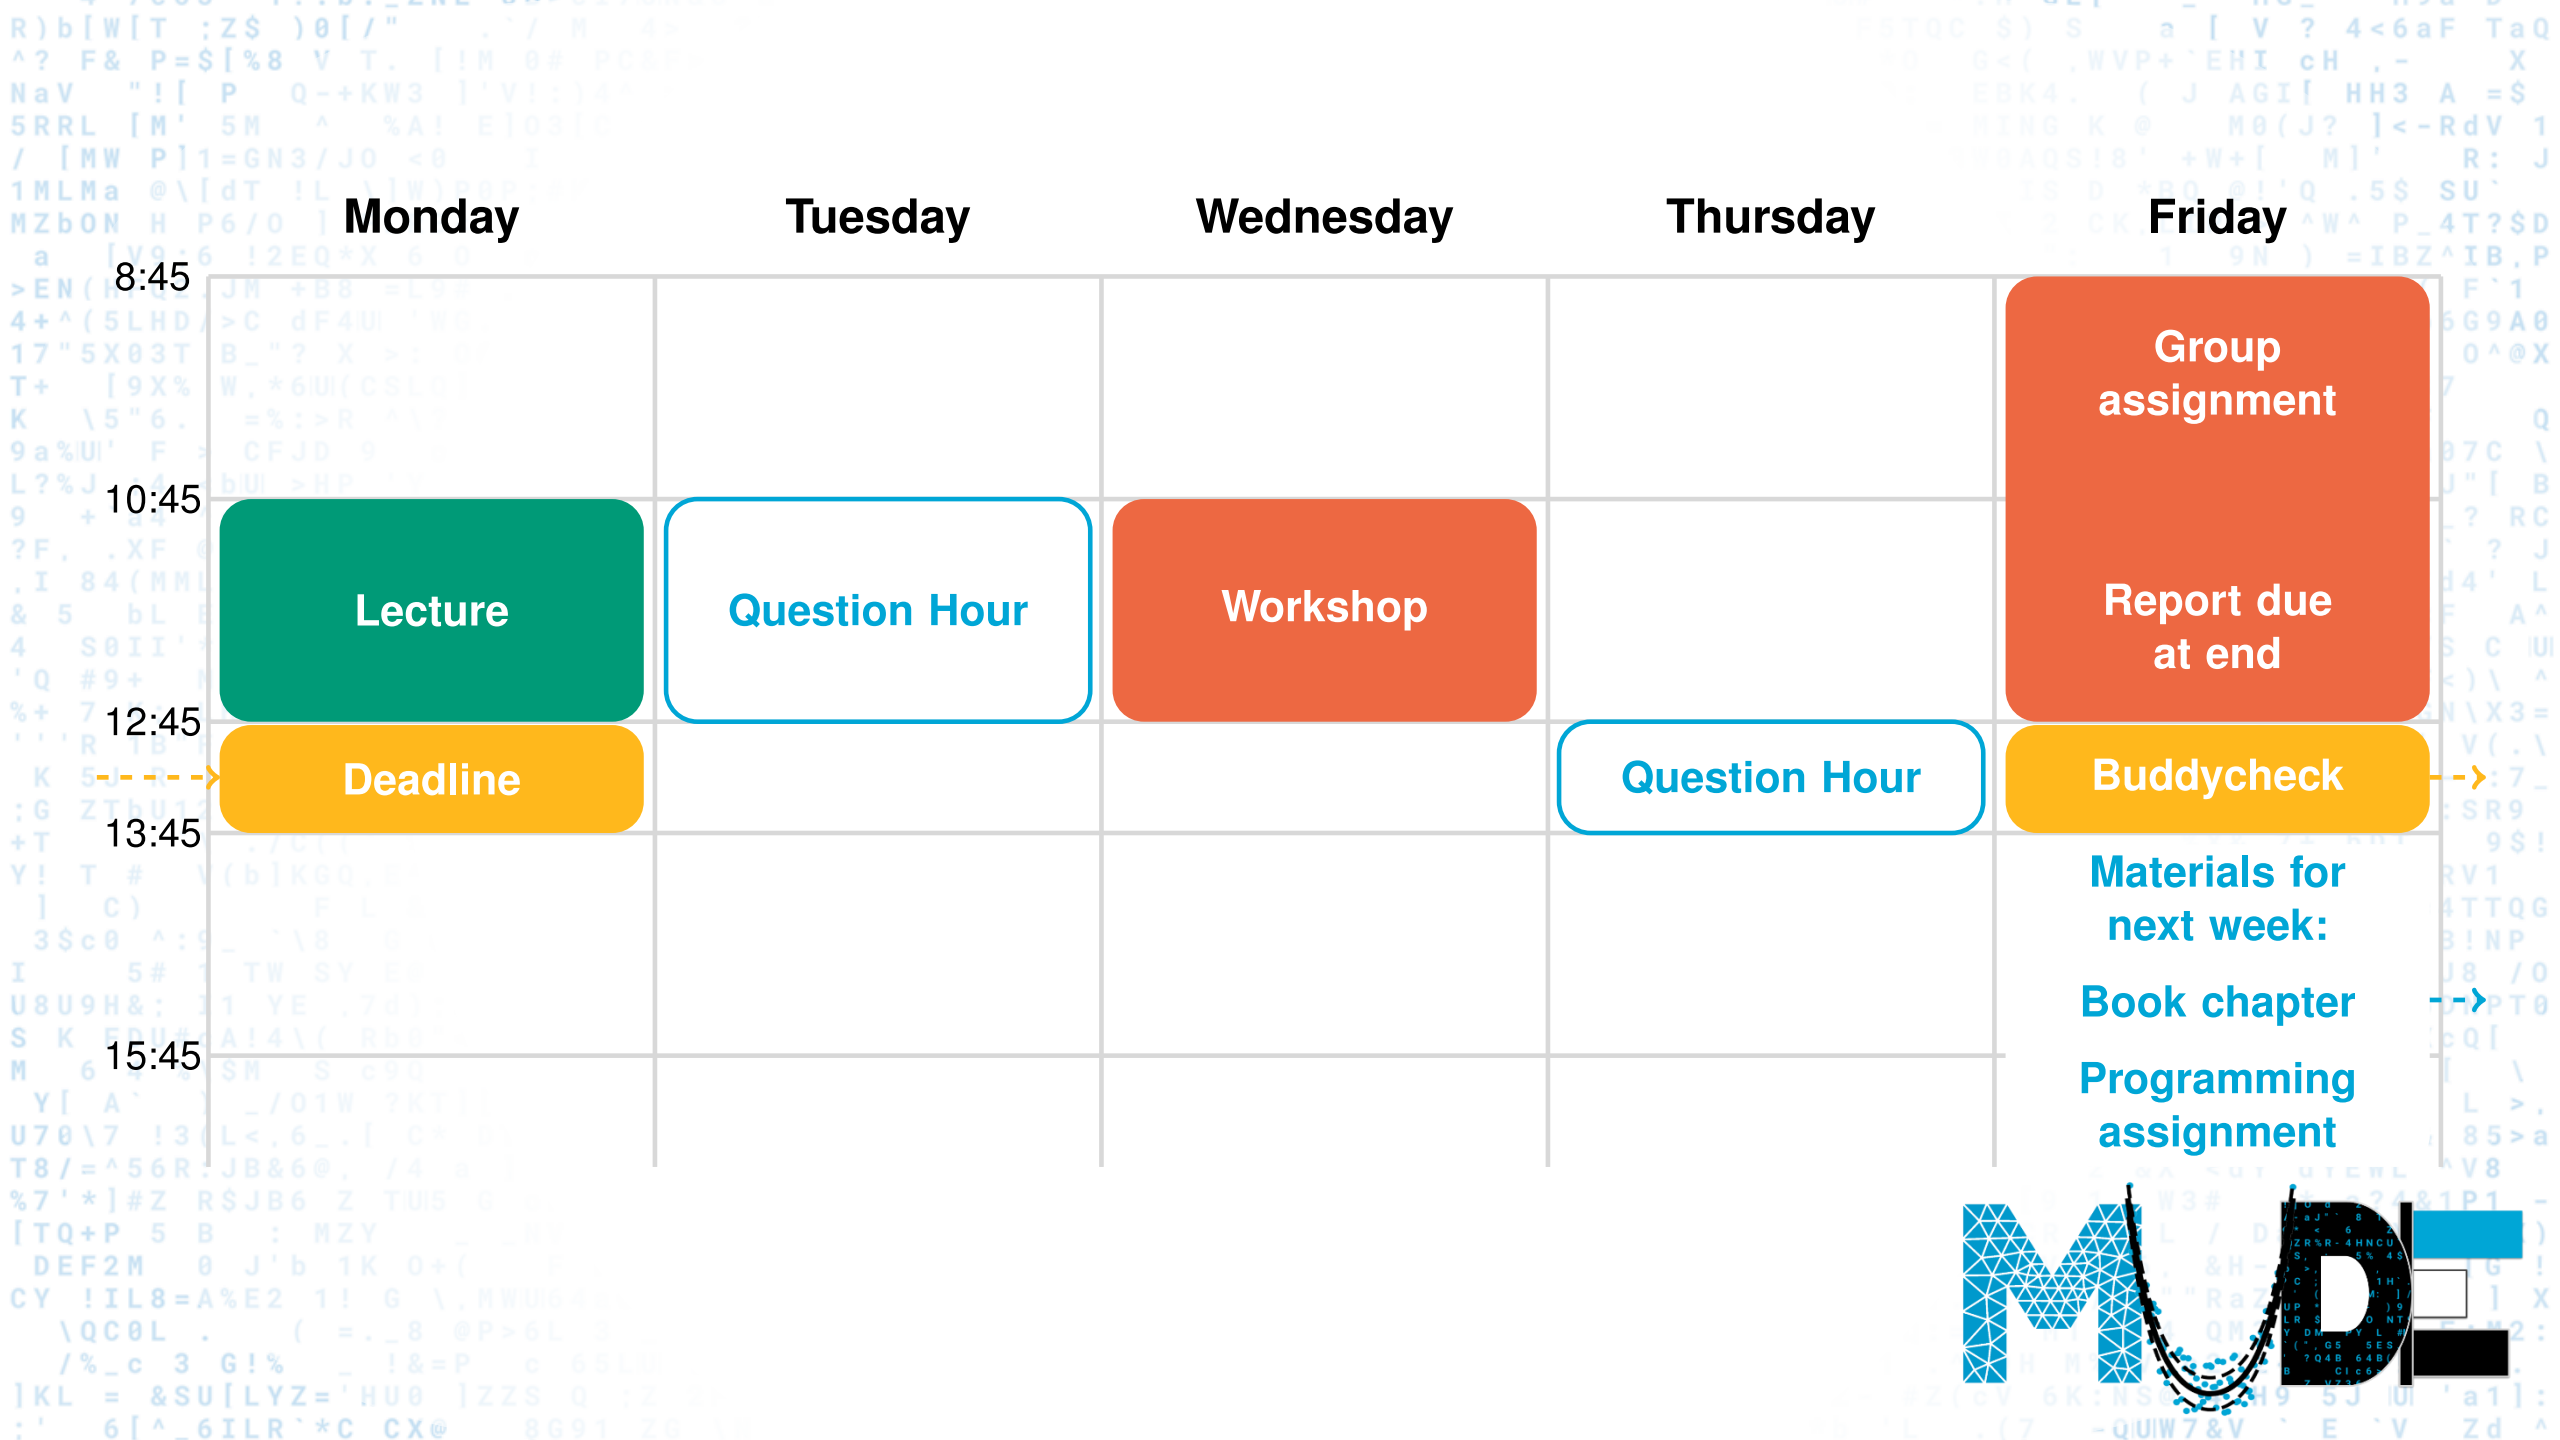

**Report due
at end**

**Materials for
next week:**

Book chapter

**Programming
assignment**

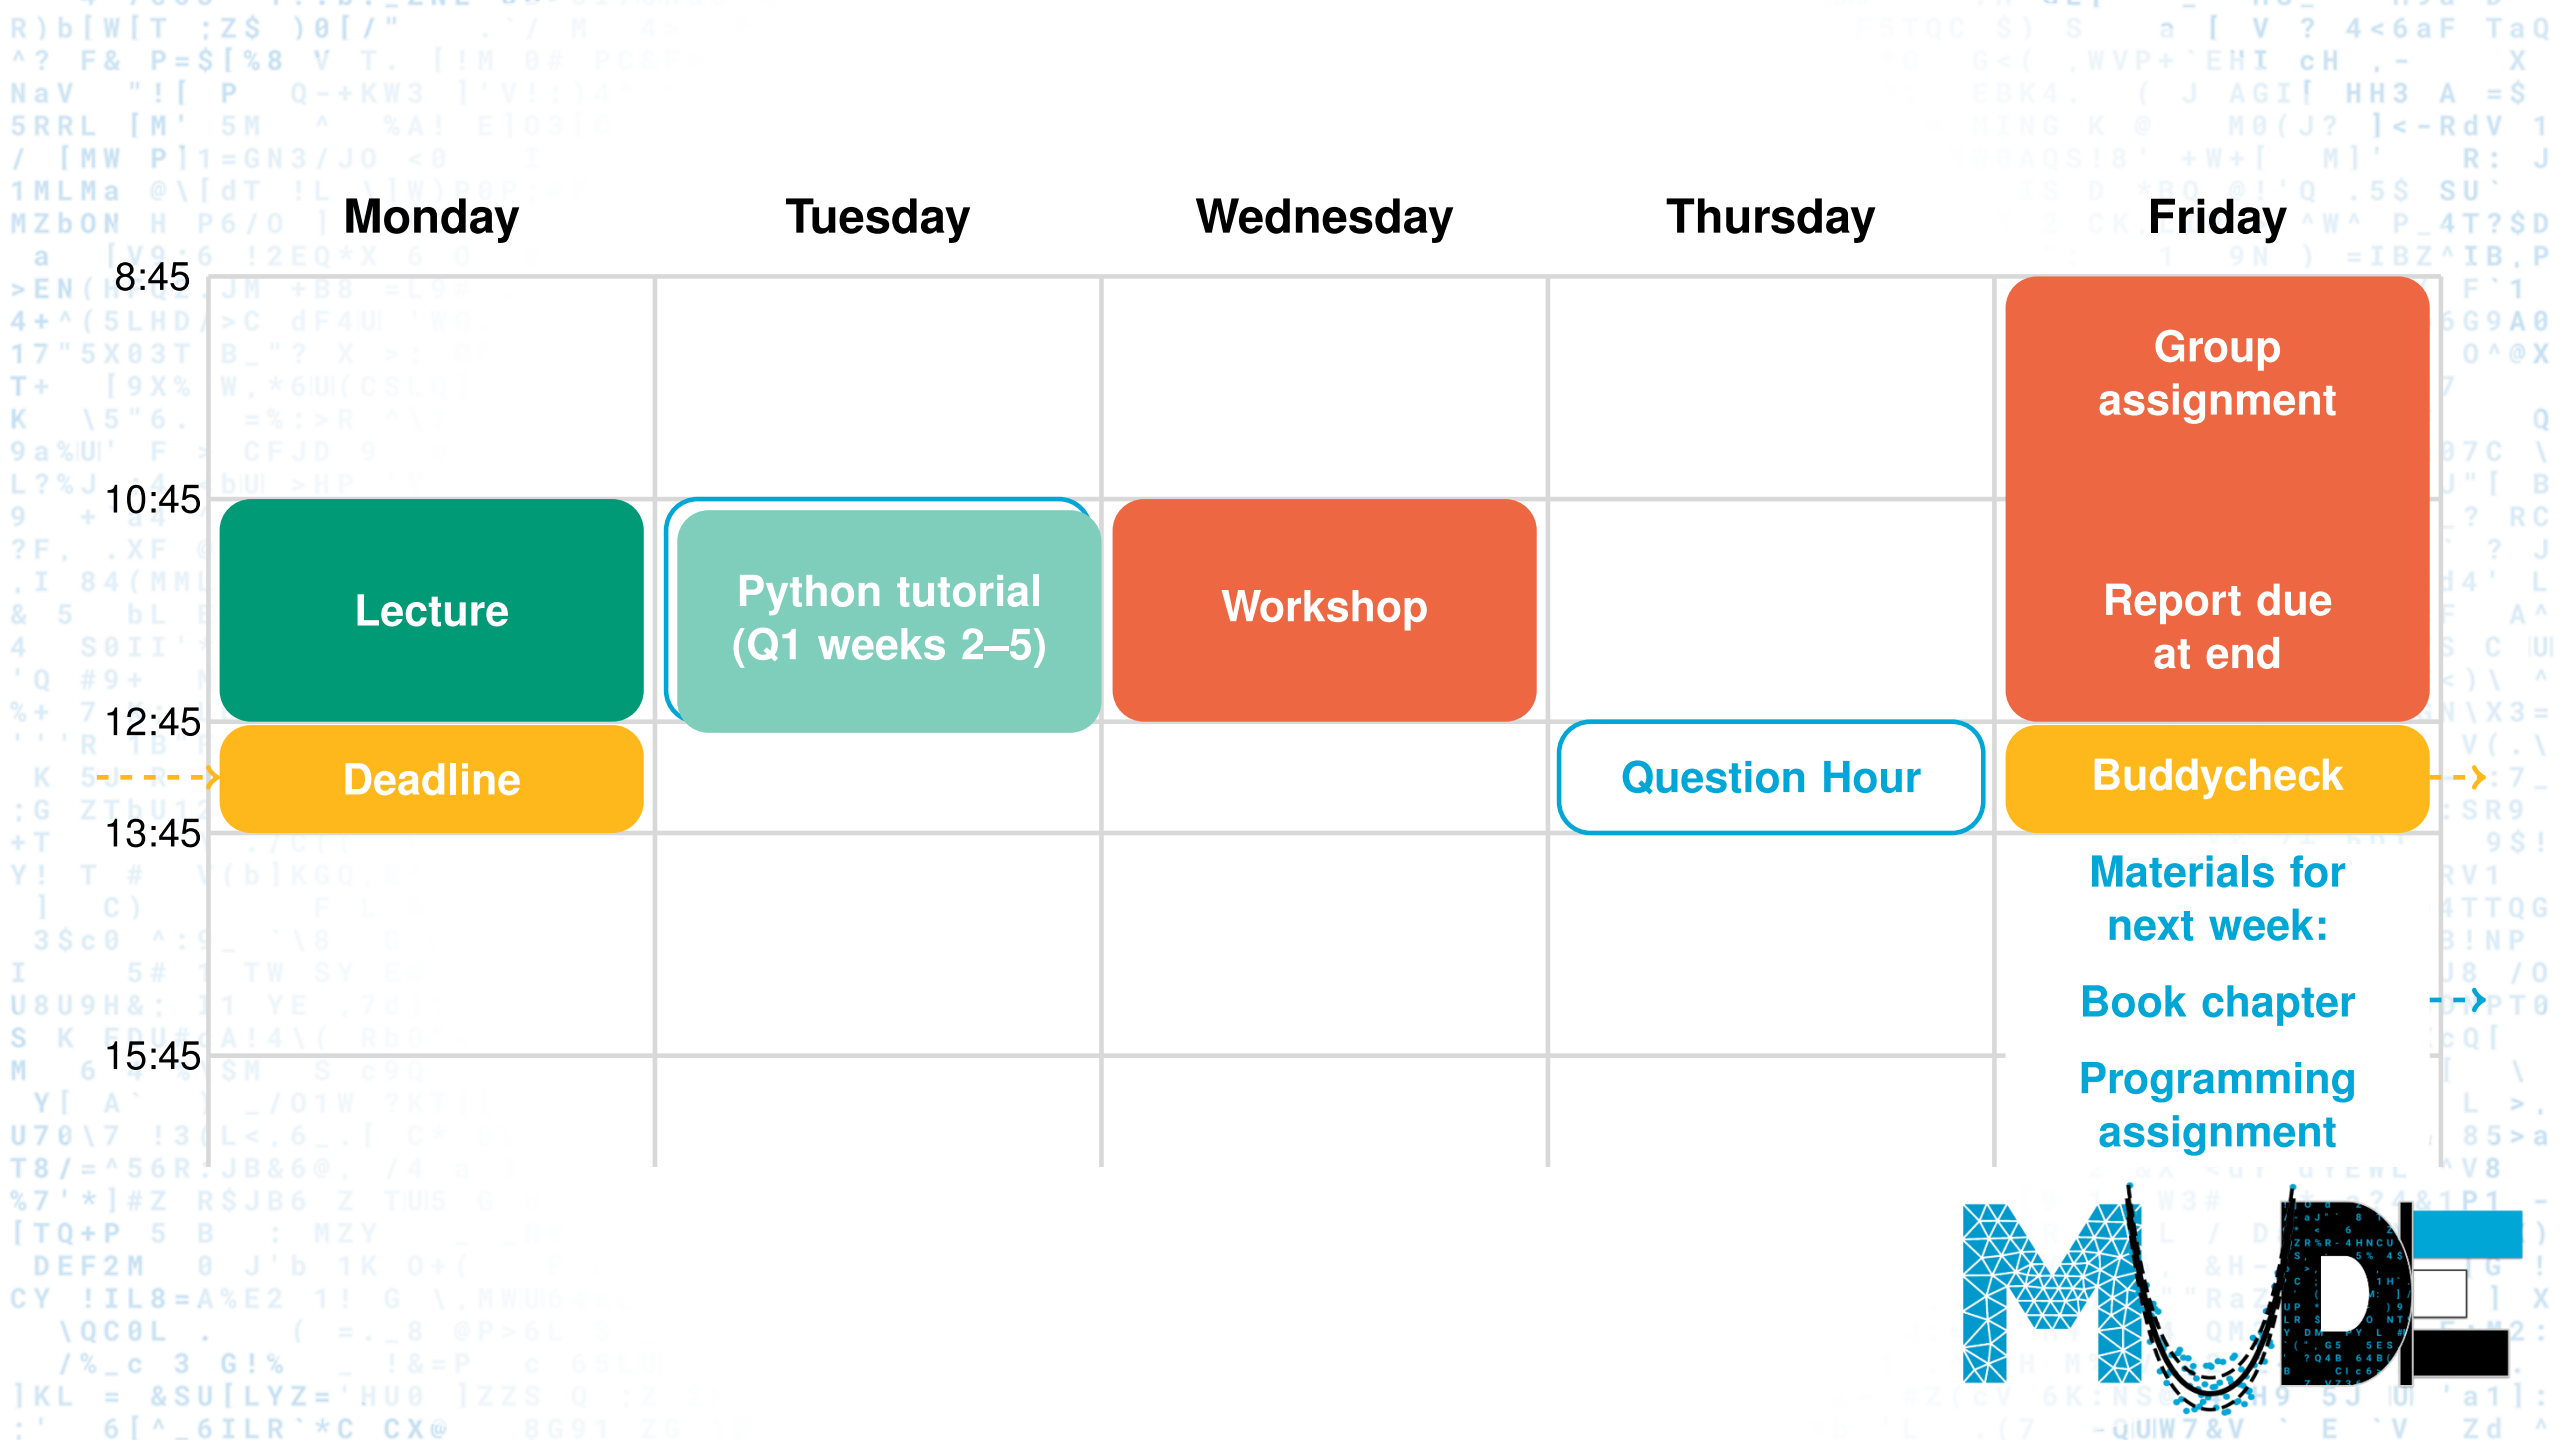

Buddycheck

- You are in the same group for a quarter
- Weekly survey on how groupwork is going
- Buddycheck will not be seen by your groupmates
- Inform us as early as possible if things are not going well so we can help
- Opens on Friday, due on Monday

Week-by-week contents

Q1

1. Introduction week
2. Numerical modelling 1
3. Numerical modelling 2
4. Univariate distributions
5. Continuous distributions
6. Uncertainty propagation
7. Observation theory 1
8. Observation theory 2

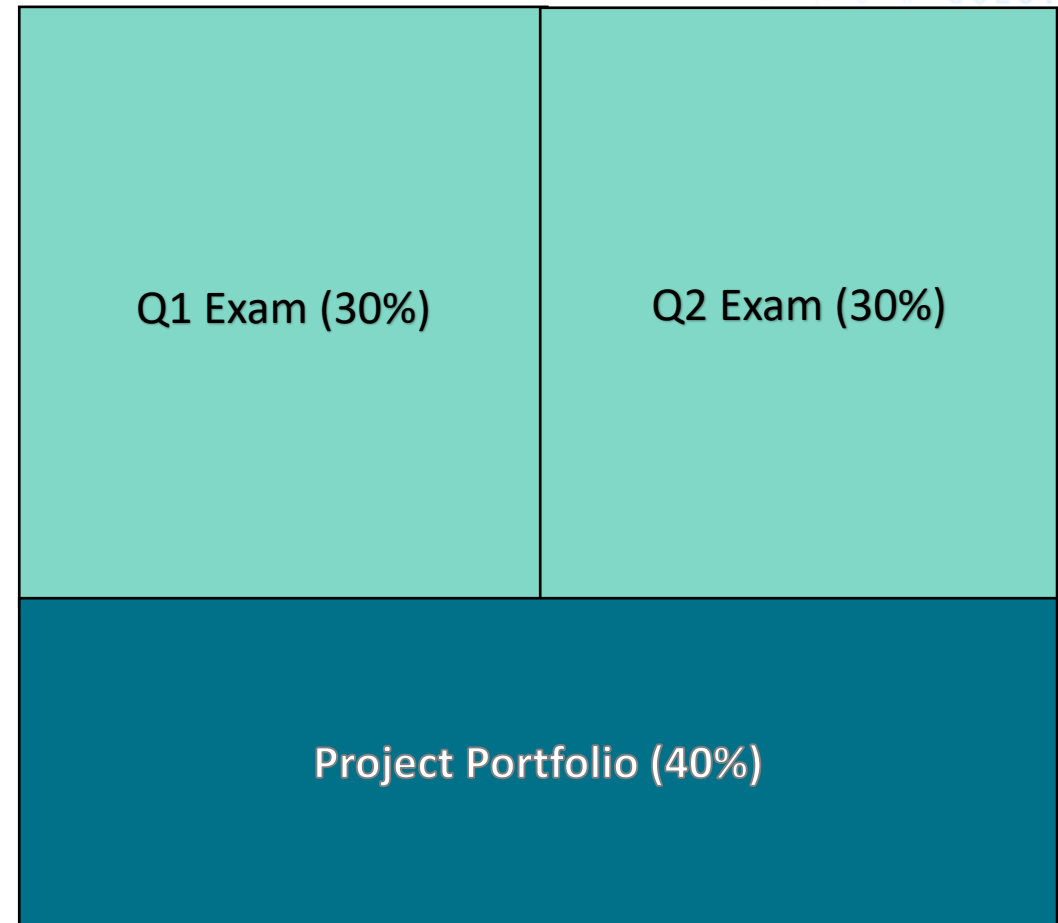

Q2

1. Numerical methods for PDEs
2. Finite element methods
3. Signal processing
4. Time series analysis
5. Optimization
6. Machine Learning
7. Extreme Value Analysis
8. Risk and Reliability

Practicalities: Assessment

- 60%: 2 written exams (Q1 + Q2)
- 40%: Project portfolio
- Weekly assignments
- See MyTimetable for up-to-date exam info
- Register in time!

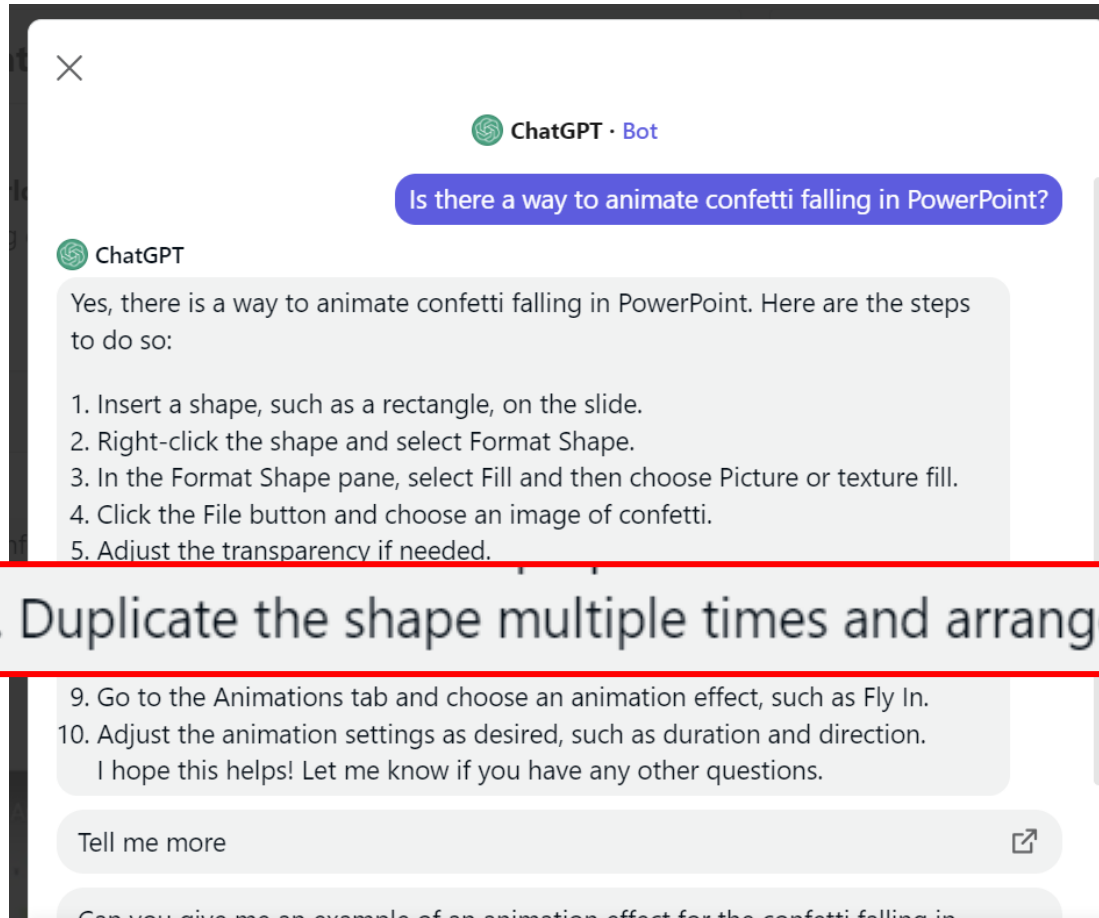

Special Requests

- Does anyone want to work in a group in a separate room?
i.e., Quiet place
- Email MUDE-CEG@tudelft.nl
- We will prioritise students with special sensory or learning needs!

Using ChatGPT in MUDE?

September 2023

- Is it feasible?
 - Yeah
- Is it practical?
 - No way!

September 2024

Is it getting better?

- More detailed?
 - Yeah
- Is it feasible still?
 - Yeah
- Is it practical now?
 - Definitely not!!!

is there a way to animate falling confetti in powerpoint

September 2025

Yes, you can animate falling confetti in PowerPoint using built-in animation tools. While PowerPoint doesn't have a default "confetti" animation, you can create the effect manually or use pre-made elements. Here are a few ways to do it:

Option 1: Use Pre-Made Confetti GIF or Video

Easiest method

1. **Find a confetti animation** (GIF or video with transparent background):
 - Search for "confetti transparent GIF" or "confetti green screen video."
 - Ensure it's a looping animation if needed.
2. **Insert into PowerPoint:**
 - Go to **Insert > Pictures** (for GIFs) or **Insert > Video**.
 - Resize and position it at the top of the slide.
3. **Set to autoplay:**
 - Select the video/GIF.
 - Go to **Animations > Animation Pane > Start With Previous**.
4. (Optional) **Remove green background** using the **Remove Background** tool or video editing beforehand.

- Last year, it finally told us to get an external image!

September 2025

Option 2: Create Confetti Effect with Shapes and Animation

More customizable but time-consuming

1. Draw confetti pieces:

- Insert small shapes (circles, stars, rectangles) in different colors.
- Use **Insert > Shapes**.

2. Animate them:

- Select each shape.
- Go to **Animations > Add Animation > Motion Paths > Down**.
- Adjust the **duration** to make the fall slower (e.g., 2–5 seconds).
- Use **Timing > Start: With Previous** or **After Previous**.
- Add **Spin** or **Grow/Shrink** animations for more realism.

3. Duplicate and randomize:

- Copy multiple shapes.
- Vary the motion path direction, duration, and start time slightly to make it look natural.

- But it still suggested the old way in option 2!

Option 3: Use PowerPoint Add-ins or Templates

There are some animated PowerPoint templates or add-ins (like **PresenterMedia** or **Envato Elements**) that offer pre-animated confetti effects.

September 2026

Welcome to MUDE.pptx
Presentation

Add a confetti animation to slide 2 of this presentation

Done. I added a looping confetti animation to **slide 2**.

Download the [presentation with confetti](#)

The original presentation is unchanged.

Modelling, Uncertainty, and Data for Engineers

AI and MUDE

Philosophically:

- We also don't know exactly what the future engineer will do
- Human expertise remains valuable
- Especially when it comes to fundamentals
- Don't let AI stand in the way of learning

Pragmatically:

- Remember: at the exam, you will be on your own
- Final report for group assignments with **laptops closed**

Practicalities: learning platforms

All material is accessible through the website: mude.citg.tudelft.nl

Brightspace: Course information and announcements. Join CEGM1000-25!

Online textbook: mude.citg.tudelft.nl/book

Questions and answers: answers.citg.tudelft.nl

MUDE email: MUDE-CEG@tudelft.nl (personal issues only)

This week

- Introduction to modelling concepts (in a minute)
- Get to know your group (tomorrow and Friday)
- Set up your computer (PA 1.1, WS1.1)
- Learn about git (today and GA1.1)

10 min break...

If you haven't already,
use your phone to scan the QR
and answer this survey!

It is needed for group formation

MUDE (CEGM1000 26) Introductory Questionnaire

Another survey!

- For statistics later on in week 1.3-1.4
- Anonymous
